

Go

The powerful, flexible, single-loop fire panel

Standalone fire protection for complete peace of mind

Go is the new-generation, single-loop fire alarm control panel from Advanced. It provides easy, cost-effective access to popular features from our MxPro 5 range in a simple, non-networkable format. It's the ideal solution for all small to medium-sized sites that don't require networking but rely on quality, performance and ease of use.

Easy to install and use

- Easy-fit chassis and unique door design to ensure fast installation
- Familiar controls and menus
- New, intuitive config tool makes setup quicker and easier than ever
- Powerful design checker so you can prove your system works without visiting site
- Highly-rated technical support service, should you need it.

Feature-rich and flexible

- A wide range of cause-and-effect programming to suit your site
- Comprehensive false alarm management to minimise unwanted alarms
- Enhanced diagnostics for fewer faults, faster fixes and better performance
- 15 zonal LEDs as standard for BS 5839 compliance without the need to buy a separate LED zone card
- Compatible with three leading detector protocols plus wired and wireless versatility
- A choice of two panel address sizes.

Fast and efficient

- Built-in peripherals including USB, RTC and ethernet ports, as well as the latest microcontroller technology, to ensure fast operation.

Ready now and for the future

- Go's state-of-the-art technology ensures high performance today – and for years to come.
